

# Global and regional connectivity solutions

## On-board connectivity for the maritime industry

### KEY BENEFITS

- Reliable voice and connectivity solutions for vessels, from private yachts to commercial shipping
- Large range of packages ranging from 256 Kbps download / 128 Kbps upload to 2 Mbps download / 512 Kbps upload
- Committed Information Rates (CIR) from 64 Kbps up to 1 Mbit/s
- Unique Network Operating Control (NOC)
- Remote diagnosis via remote back-door functionality
- Connectivity with corporate networks or to the internet
- Flexible solutions for short-term requirements

**E**utelsat satellites deliver global and regional connectivity solutions to a diverse range of markets that includes commercial shipping, sea-based oil and gas operations, governmental ships, cruisers, ferries and yachting.

As a satellite operator we provide powerful and extensive coverage for maritime services, with total flexibility on bandwidth requirements. Globally, via our own resources and through partnerships with other satellite operators, we provide fleets and individual vessels with the connectivity and infrastructure they need wherever they need it.

### GLOBAL ACCESS

Eutelsat Global Access enables broadband services using Ku-band VSATs with one-meter antennas. The location and communication status of the VSAT system on-board a vessel is continuously monitored by servers located in the shore station through the Global Network Management Systems (GNMS).

Our Global Access services are available through a network of partners. We match clients with the most suitable reseller according to their needs and location.

### REGIONAL CONNECT

Eutelsat has pioneered the development of today's maritime telecommunications and continues to invest in new technologies and in-orbit resources.

Our VSAT Regional Connect solutions provide corporate-class networking services tailored to the specific requirements of fleets, with flexible bandwidth requirements on a regional basis.

A large range of technologies, including SCPC and DVB-S2/TDMA, provide efficient and reliable connectivity.

### INSTANT LINK

Instant Link is an easy-to-deploy connectivity solution, enabling flexible, broadband services for short-term requirements, from one day to three months, and from just 1 MHz to a full 72 MHz transponder.

Our maritime satellite coverage from the Americas to Asia, in Ku and C-band, makes this solution particularly popular for the luxury yacht market, cruisers and mobile Oil & Gas platforms, whose requirements vary seasonally.

Simple to set up and operational very quickly, Instant Link is available via our 24/7 Sales and Reservation Centre.
